## Algoritma Brute Force

Dalam pengerjaan tugas kecil ini, algoritma *brute force* sangat diutamakan. Dalam program yang dibuat penulis, setelah menerima input kata yang harus dicari, penulis langsung mencari indeks dari huruf pertama kata yang dicari. Setelah menemukan indeks tersebut, dipanggil fungsi yang berfungsi untuk mencari arah, dapat dibilang fungsi ini juga yang menjadi fungsi utama untuk mencocokkan kata yang dicari dengan huruf dalam puzzle.

Memasuki fungsi ini, atau yang dalam program disebut fungsi `findArah`, pertama ditentukan dulu *value* dari variabel arah. Disini arah direpresentasikan dengan angka 1 hingga 8, dimana angka 1 adalah arah atas, 2 arah kanan atas, 3 arah kanan, dan seterusnya mengikuti arah jarum jam. Jika didapat bahwa ternyata huruf kedua yang ada di puzzle tidak sesuai dengan huruf kedua dari kata yang dicari, maka nilai arah ditambah 1. Sedangkan jika huruf kedua cocok, maka variabel penghitung panjang huruf akan ditambah 1. Saat nilai variabel penghitung panjang huruf tersebut sudah sama dengan panjang kata yang dicari, maka kata sudah ditemukan, dan langsung masuk ke fungsi untuk mencetak jawaban. Namun, jika semua arah sudah dicek dan masih tidak dapat ditemukan katanya, maka akan kembali ke fungsi utama dan mencari indeks lain untuk huruf pertama kata yang dicari.

Setelah kata ditemukan, akan masuk ke fungsi yang bernama `printMatrixJawab`, disini jawaban akan dicetak sesuai dengan arah yang sudah didapatkan sebelumnya. Untuk setiap arah, terdapat batasan yang berbeda agar kata yang dimaksud yang di print. Jika indeks yang sedang diproses tidak sesuai dengan batasan, akan diprint karakter “-”. Selama proses ini, setiap perbandingan kata dihitung dan setelah print matriks solusi, diprint juga jumlah perbandingan kata serta waktu yang dibutuhkan untuk menjalankan semua proses dari awal ini.

Setelah semua di print, program akan melanjutkan ke kata selanjutnya dan mengulang proses dari awal. Apabila sudah tidak ada kata lagi, maka akan dicetak total waktu yang dibutuhkan dari awal setelah input file hingga semua kata ditemukan. Setelah itu program selesai.

A word search puzzle grid consisting of a large square area filled with small, light gray dots. Scattered throughout the grid are several uppercase letters in a serif font. The letters visible are: S, T, A, N, D, P, O, I, N, T.

A 20x20 grid of dots on a black background. The letters 'S', 'T', 'U', and 'B' are placed at specific grid intersections. 'S' is at row 10, column 15. 'T' is at row 11, column 14. 'U' is at row 12, column 13. 'B' is at row 13, column 12.

COLLECTIVELY

A 20x20 grid of dots on a black background. The letters C, O, R, A, and L are formed by removing dots in specific patterns. C is at the top center, O is below it, R is to the right of O, A is below R, and L is to the right of A.

A 20x20 grid of dots. The letters 'I', 'L', 'A', 'T', 'I', 'C', 'Z', 'E', 'D' are placed at specific grid intersections. The letters are arranged in a pattern that suggests the word 'LATICIDE'. The letters are as follows:

- I: Row 1, Column 15
- L: Row 2, Column 10
- A: Row 3, Column 12
- T: Row 4, Column 11
- I: Row 5, Column 15
- C: Row 6, Column 16
- Z: Row 7, Column 17
- E: Row 8, Column 18
- D: Row 9, Column 19

## Link Drive Kode Program

[https://github.com/hcarissa/Tucil1\\_13520164.git](https://github.com/hcarissa/Tucil1_13520164.git)

## Checklist

Poin	Ya	Tidak
1. Program berhasil dikompilasi tanpa kesalahan (no syntax error)	✓	
2. Program berhasil running	✓	
3. Program dapat membaca file masukan dan menuliskan luaran.	✓	
4. Program berhasil menemukan semua kata di dalam puzzle	✓
